General Standards Corporation High Performance Bus Interface Solutions

66-18A08

18-Bit Eight-Output 500KSPS Precision Wideband

PMC Analog Output Board

Available in PMC, PCI, cPCI and PC104-Plus and PCI Express form factors as:

PMC66-18AO8:	PMC, Single-width
PCI66-18AO8:	PCI, short length
Cpci66-18AO8:	cPCI, 3U
PC104P66-18AO8:	PC104- <i>Plus</i>
PCIe66-18AO8:	PCI Express
PCIe10466-18AO8:	PCIe, one-lane on PC/104 form factor

See Ordering Information for details.

Call for availability of other form factors, such as XMC, CCPMC, etc.

FEATURES:

8 Single-ended or 3-Wire Differential 18-Bit Analog Output Channels
Simultaneous Clocking; Individual R-2R 18-Bit DAC per output channel
DC to 500KSPS Sample Rate per Channel; 0-4 MSPS aggregate rate
Output ranges: ±10V, ±5V, ±2.5V, software-selectable
Independent 256K-sample output FIFO Buffer
8 Bidirectional Digital I/O lines; Software-selectable TTL or LVDS compatibility
Internal Sample Rate Generator with 24-Bit rate divider
Hardware Sync and Clock I/O for Multiboard Synchronization; Front-panel and Internal access
Conforms to PCI Bus Specification, Revision 2.3, 66/33 MHz with Universal Signaling
Standard Single-width PMC Form factor
DMA Engine Supports Block-Mode Transfers in Two Channels
On-demand Autocalibration
Integrated DC/DC Conversion and Dual Regulation for Internal Supply Voltages

TYPICAL APPLICATIONS:

FUNCTIONAL DESCRIPTION

The PMC66-18AO8 is a precision 18-Bit analog output product that provides eight simultaneously clocked output channels. Outputs can be clocked at rates up to 500 KSPS per channel, and are supported by a 256K-Sample FIFO data buffer. Both continuous and burst clocking modes are supported, and voltage ranges are software-selectable as $\pm 10V$, $\pm 5V$ or $\pm 2.5V$. Clocking and triggering rates can be derived from an internal rate generator, or from external clock and trigger sources to support the synchronous operation of multiple boards.

Each analog output channel implements a weighted-DAC R-2R configuration, which minimizes latency and has no minimum clocking rate. The outputs can be software-configured either for single-ended operation or for 3-wire differential operation.

On-demand autocalibration determines and applies error correction for all output channels, and a selftest switching network permits board integrity to be verified by the host. Eight bidirectional digital I/O lines are programmable as inputs or outputs.

Figure 1. PMC66-18AO8; Functional Organization

This product complies with the IEEE PCI local bus specification Revision 2.3. System connections are made at the front panel through a high-density 68-Pin connector. Power requirements consist of +5 VDC in compliance with the PCI specification, and analog power voltages are generated internally. Operation over the specified temperature range is achieved with conventional air cooling.

PERFORMANCE SPECIFICATIONS

At +25 °C, with specified operating voltages

Analog Output Characteristics:

Configuration:	Eight simultaneously clocked output channels with a dedicated 18-Bit R-2R DAC per channel. Software-selectable as either single-ended or 3-wire balanced differential. 4-Channel version also available.	
Voltage Ranges:	±10V, ±5V or ±2.5V full scale for all output channels, software-selectable.	
Output Resistance:	1.0 Ohm maximum at I/O connector pins.	
Output protection:	Withstands sustained short-circuiting to ground	
Loading:	Zero to ±3ma, any single channel. <i>Maximum total of 16mA on all outputs.</i> Stable with any load capacitance	
Line Imbalance:	(Differential output mode) ±15mV max.	
Signal/Noise Ratio (SNR):	90dB typical on ±10V range; 10Hz - 250kHz	
Glitch Impulse:	12 nV-s, typical on ±5V range	

Analog Output Transfer Characteristics:

Resolution:	18 Bits (0.0004 percent of FSR)			
Output Access:	256K-Sample FIFO buffer.			
DC Accuracy:	S.E. Range	S.E. Zero Accuracy	S.E. ±Fullscale Accuracy	
(Max error, no-load)	±10V	±0.6mV	±1.7mV	
	±5V	±0.4V	±1.2mV	
	±2.5V	±0.3mV	±0.7mV	
	Diff Range*	Diff Zero Accuracy	Diff +Fullscale Accuracy	
	±10V	±1.5mV	±6mV	
	±5V	±1.2mV	±4mV	
	±2.5V	±1.0mV	±3mV	
	* Differential o	utput is measured betwee	en OUTPUT-XX-HI and OUTPUT-XX-LO.	
Settling Time:	6us to 0.1 percent of step, typical with halfscale step, no-load.			
Crosstalk Rejection:	90 dB minimum, DC-100 kHz			
Integral Nonlinearity:	±0.002 percent of FSR, maximum			
Differential Nonlinearity:	±0.001 percent of FSR, maximum			

Analog Output Operating Modes and Controls

Output Data Buffer:	256K-sample FIFO
Sample Clock Sources:	Internal rate generator; External Clock I/O, Software clock. 500kHz max.
Triggering Sources:	Internal rate generator, TTL external trigger I/O, Software trigger.
Clocking Modes:	Continuous or periodic. Supports triggered functions.
Internal Rate Generator:	Programmable from 3 to 500,000 output clocks per second. Divides Master Clock frequency to clocking rate using a 24-bit divider.
External Sync I/O:	Clock and trigger, selectable as TTL or LVDS.
Output Data Format:	18 Bits, selectable as offset binary or two's complement coding, with attached end-of-function flag and channel number.

Digital Input/Outputs:

Eight TTL I/O lines in two groups of four bits, group-configurable as inputs or outputs. 0.2ma maximum input loading as current source, 8ma output loading as either source or sink. Direct register control.

PCI Compatibility:

Conforms to PCI Specification 2.3, D32 read/write, 33/66MHz, universal (5V/3.3V) signaling, Supports block-mode DMA data transfers as bus master in two channels.

Power Requirements

+5VDC ±0.25 VDC at 1.3 Amps typical, 1.5 Amps maximum. Supplied by PCI bus.

PHYSICAL PARAMETERS

Physical Dimensions: (PMC Form Factor)

 Height:
 13.5 mm (0.53 in)

 Depth:
 149.0 mm (5.87 in)

 Width:
 74.0 mm (2.91 in)

 Shield:
 Side-1 is protected by an EMI shield.

Environmental Specifications

Ambient Temperature Range:	Operating 0 to +65 Degrees Celsius inlet air: Storage: -40 to +85 Degrees Celsius
Relative Humidity:	Operating: 0 to 80%, non-condensing Storage: 0 to 95%, non-condensing
Altitude:	Operation to 10,000 ft.
Cooling:	Conventional air cooling; 150 LFPM

ORDERING INFORMATION

Specify the basic product model number followed by an option suffix "-A-B-C", as indicated below. For example, model number **PMC66-18AO8-8-40.32M** describes a PMC module with eight output channels and a 40.320MHz master clock frequency.

Basic Model Number	Form Factor
PMC66-18AO8	PMC (Native)
PCI66-18AO8 ¹	PCI, short length
Cpci66-18AO8 ¹	cPCI, 3U
PCIe66-18AO8 ¹	cPCI, 3U
PC104P66-18AO8	PC104-Plus
PCIe10466-18AO8 ^{1,2}	PCIe, one-lane on PC/104 form factor

¹ Module installed and tested on an adapter, with mechanical and functional equivalency. Contact factory for availability in native form factors.

² PCIe104 supports only the PCIe bus.

Optional Parameter	Value	Specify Option As:
Number of Channels:	8 output channels	A = 8
	4 output channels	A = 4
Master Clock Frequency	Standard 40.32MHz.	C= 40.32M
	*	*
Custom Features	*	*

* Contact factory for custom frequencies, or for availability of other custom features..
