

# Talon RTR 2746

200 MS/sec RF/IF  
rugged rackmount recorder

## Built for lab and field environments

- Intended for military, airborne, and UAV applications requiring a rugged system
- Real-time aggregate recording rates of up to 3.2 GB/sec
- Up to 243 TB of front-panel removable solid state storage
- SystemFlow GUI with Signal Viewer analysis tool

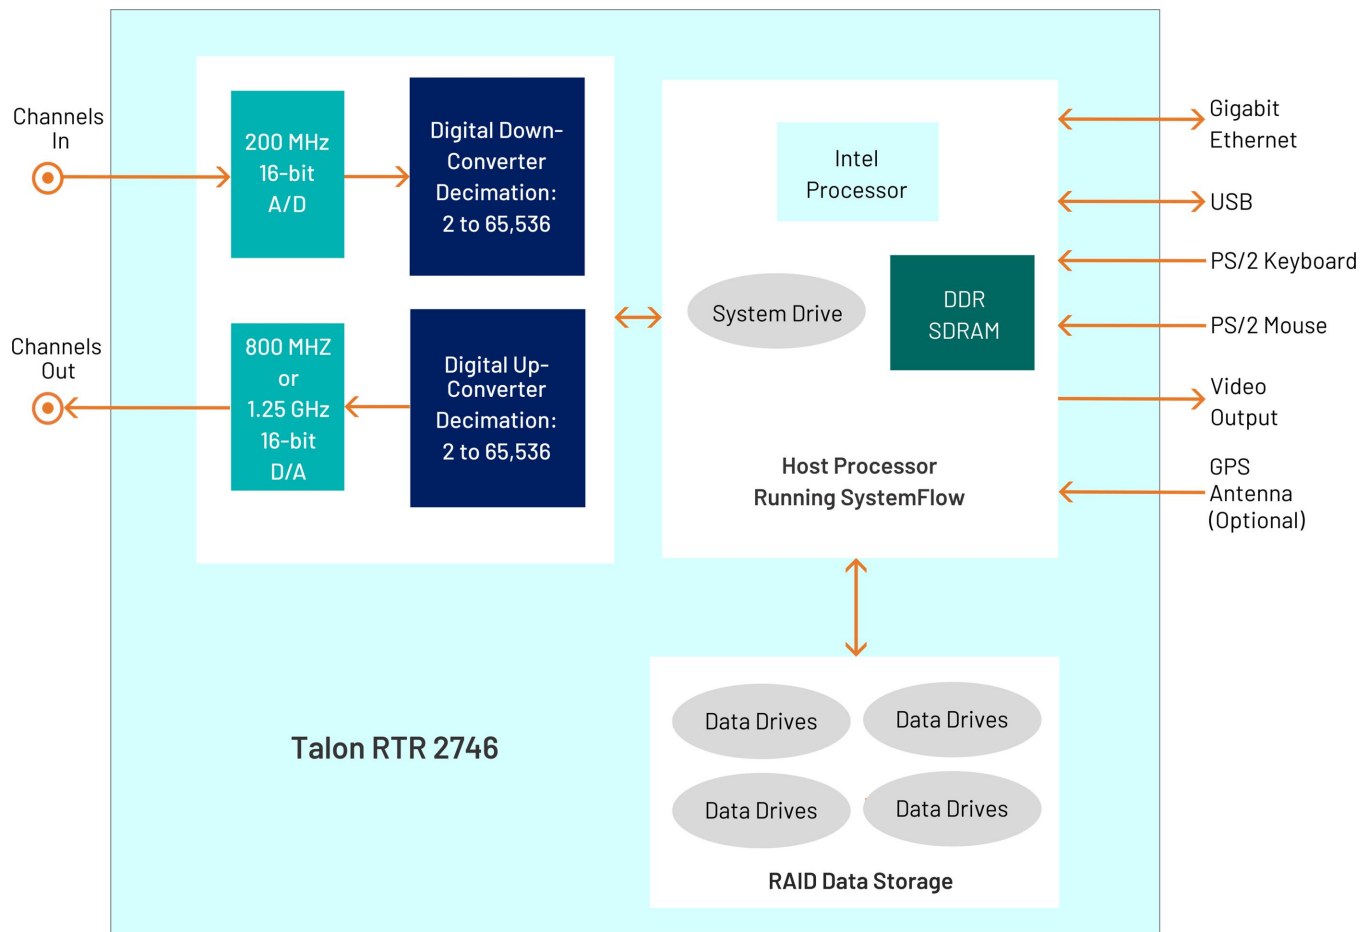

**The Talon<sup>®</sup> RTR 2746 is a turnkey, multiband recording and playback system, which is built for lab and field environments.** Designed to withstand high vibration and operating temperatures, the RTR 2746 is intended for military, airborne, and UAV applications requiring a rugged system. With scalable A/Ds, D/As, and SSD (Solid-State Drive) storage, the RTR 2746 can be configured to stream data to and from disk at rates as high as 3.2 GB/sec.

The RTR 2746 uses Mercury's high-powered Virtex-6-based Cobalt<sup>®</sup> boards, which provide flexibility in channel count with optional digital downconversion capabilities. Optional 16-bit, 1.25 GHz D/A converters with digital upconversion allow real-time reproduction of recorded signals.

A/D sampling rates, DDC decimations and bandwidths, D/A sampling rates, and DUC interpolations are among the GUI-selectable system parameters, providing a fully programmable system capable of recording and reproducing a wide range of signals. Optional GPS time and position stamping allows the user to record this critical signal information.

FEATURES

- Operates under conditions of shock and vibration
- 4U 19-inch rugged rackmount PC server chassis
- Windows® workstation with Intel® processor
- 200 MHz max. 16-bit A/D sampling for recording - up to eight channels
- 80 MHz recording/playback signal bandwidths
- Capable of record/playback of IF frequencies to 700 MHz
- Real-time aggregate recording rates of up to 3.2 GB/sec
- Removable SSD drives
- Up to 243 terabytes of storage to NTFS RAID disk array
- RAID levels of 0, 5, and 6
- SystemFlow® GUI with signal viewer analysis tool
- C-callable API for integration of recorder into application
- File headers include time stamping and recording parameters
- DDC decimation and DUC interpolation range from 2 to 65,536
- Optional GPS time and position stamping

## RUGGED AND FLEXIBLE ARCHITECTURE

Because SSDs operate reliably under conditions of shock and vibration, the RTR 2746 performs well in ground, shipborne, and airborne environments. The hot-swappable SSDs provide storage capacity of up to 243 TB. The drives can be easily removed or exchanged during or after a mission to retrieve recorded data.

The RTR 2746 is configured in a 4U 19-inch rack-mountable chassis, with hot-swap data drives, front panel USB ports, and I/O connectors on the rear panel. All recorder chassis are connected via Ethernet and can be controlled from a single GUI either locally or from a remote PC.

Multiple RAID levels, including 0, 5, 6, provide a choice for the required level of redundancy. Systems are scalable to accommodate multiple chassis to increase channel counts and aggregate data rates.

## SYSTEMFLOW SOFTWARE

All Talon recorders include the Mercury SystemFlow<sup>®</sup> recording software. SystemFlow software enables users to configure and control a Talon recorder:

- The SystemFlow GUI provides a point-and-click user interface. It includes Configure, Record, Playback, and Status screens, each with intuitive controls and indicators. The user can easily move between screens to configure parameters, control and monitor a recording, and play back a recorded stream.
- SystemFlow API provides a set of C-callable libraries that allow engineers to develop their own user interface to configure and control their Talon recorder. Additional high-level libraries, like Python, are available upon request.

The SystemFlow GUI and API can be run from a remote connection over Gigabit Ethernet. Recorders can be set up to run autonomously by implementing scripts using the API interface.

Talon systems record all data to the native NTFS file system, allowing for quick and easy access to the data from any computer. A simple header that holds the recording parameters is added to the beginning of each file. An optional GPS receiver allows the user to precisely timestamp files and optionally track the recorder's position throughout a mission.

To learn more about SystemFlow software, contact Mercury at [techsales@mercy.com](mailto:techsales@mercy.com).

## SYSTEMFLOW SIMULATOR

To learn more about SystemFlow software, contact Mercury at [techsales@mercy.com](mailto:techsales@mercy.com). The SystemFlow Simulator allows you to learn how to use a Talon recorder's SystemFlow software interface before you acquire a recorder or while you are waiting for delivery of a recorder.

The Simulator can simulate the operating environment of all the different Talon recorder models. The Simulator also demonstrates the SystemFlow Signal Viewer by playing recorded signals to simulate the appearance of live signals being digitized and recorded by a Talon analog signal recorder.

### Features

- Provides real-time recording system simulation
- Allows engineers to write and test their application (built using the SystemFlow API) before receiving the recorder hardware
- Demonstrates SystemFlow signal and file viewer tool
- Capable of simulating all Talon analog and digital recording systems
- Full Talon SystemFlow GUI
- Simulator can be used to develop Talon system profiles for use in the final system

Talon RTR 2746

SYSTEMFLOW GUI

The RTR 2746 GUI provides the user with a control interface for the recording system. It includes Configuration, Record, Playback and Status screens, each with intuitive controls and indicators. The user can easily move between screens to set configuration parameters,

control and monitor a recording, play back a recorded signal and monitor board temperature and voltage levels. The signal viewer, integrated into the recording GUI, allows the user to monitor real-time signals or signals recorded on disk.

DAC 1	<input type="button" value="Configure"/>	+3.3V: 3.23 V
		+2.5V: 2.47 V
		+1.8V: 1.82 V
		+1.5V: 1.49 V
Clock: <input type="button" value="Configure"/>		

**Hardware Architecture Diagram:**

Channels In → 200 MHz 18-bit A/D → Digital Down-Converter Decimation: 2 to 65,536 → Intel Processor

Intel Processor ↔ System Drive ↔ Host Processor Running SystemFlow

Host Processor Running SystemFlow ↔ DDR SDRAM

Host Processor Running SystemFlow ↔ RAID Data Storage (Data Drives)

Channels Out ← 800 MHz or 1.25 GHz 18-bit D/A ← Digital Up-Converter Decimation: 2 to 65,536

External Connections: Gigabit Ethernet, USB, PS/2 Keyboard, PS/2 Mouse, Video Output, GPS Antenna (Optional)

SYSTEMFLOW HARDWARE CONFIGURATION INTERFACE

The RTR 2746 configuration screens provide a simple and intuitive means for setting up the system parameters. The ADC configuration screen, shown below, allows user entries for input

source, center frequency, decimation, and gate and trigger information. All parameters contain limit-checking and integrated help.

The screenshot shows a configuration window titled "Channel 1 Input Parameters" with a light green background. It contains several settings:

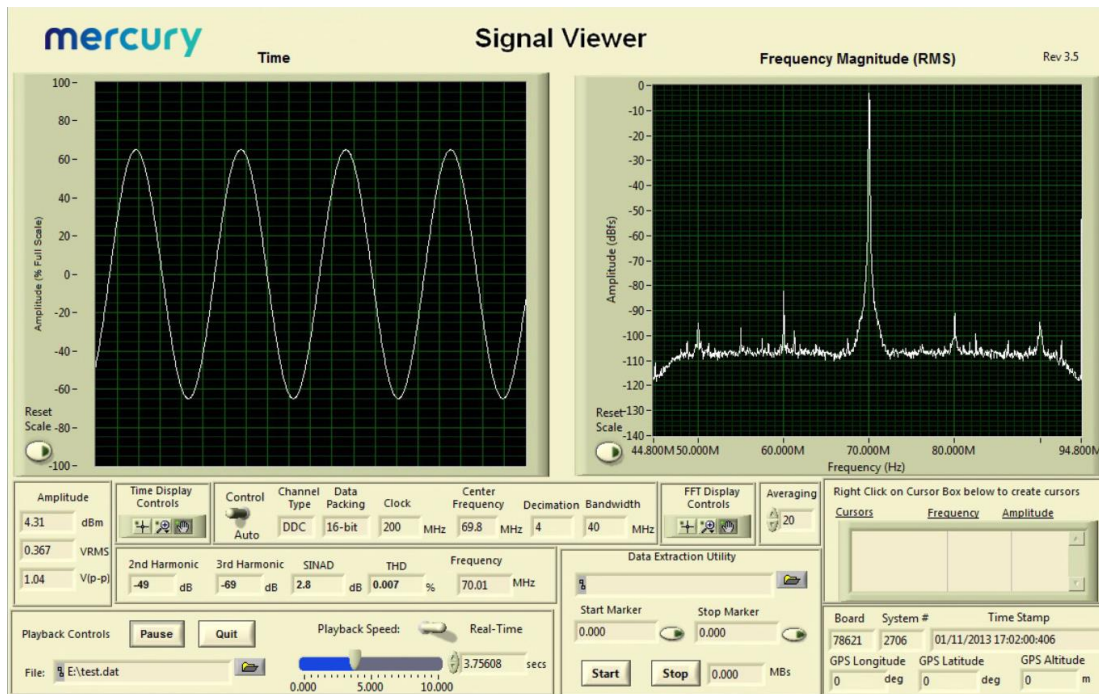

- Bandwidth:** Radio button selected, value 100.0, unit MHz (dropdown).
- Decimation:** Radio button unselected, value 1.
- Downconversion:** Unchecked checkbox.
- Input Source:** Dropdown menu set to ADC 1.
- Center Frequency:** Value 0.0, unit MHz.
- Gate / Trigger Mode:** Dropdown menu set to None.
- Gate / Trigger Polarity:** Dropdown menu set to Negative.
- Sync Source:** Dropdown menu set to Internal.
- Pulsed Radar:** Section header.
- Trigger Length:** Value 0, unit Samples.
- A/D Sampling Rate:** Value 200.0, unit MHz.
- Disk Data Rate:** Value 200.0, unit MS/s.

At the bottom are three buttons: OK, Cancel, and Apply.

**SIGNAL VIEWER**

The SystemFlow Signal Viewer includes a spectrogram, virtual oscilloscope, and spectrum analyzer for signal monitoring in both the time and frequency domains. It is extremely useful for previewing live inputs prior to recording, and for monitoring signals as they are being recorded to help ensure successful recording sessions. The viewer can also be used to inspect and analyze the recorded files after the recording is complete.

Advanced signal analysis capabilities include automatic calculators for signal amplitude and frequency, second and third harmonic components, THD (total harmonic distortion), and SINAD (signal to noise and distortion). With time and frequency zoom, panning modes, and dual, annotated cursors to mark and measure points of interest, the SystemFlow Signal Viewer can often eliminate the need for a separate oscilloscope or spectrum analyzer in the field.

## SYSTEMFLOW API

SystemFlow includes a complete API (Application Programming Interface) supporting control and status queries of all operations of the Talon recorder from a custom application.

High-level C-language function calls and the supporting device drivers allow users to incorporate the RTR 2746 as a high-performance server front end to a larger system. This is

supported using a socket interface through the Ethernet port, either to a local host or through an internet link for remote, standalone acquisition. Recorded NTFS files can be easily retrieved through the same connection. In addition to C, support is also provided for high level languages such as Python and C#. Below is an example of controlling recording via the SystemFlow API.

```
728     }
729     //transfer until end of disk
730     else if (transferType == TRANSFER_END_OF_DISK)
731     {
732         recordParams->transferTime = 0;           // must set to 0
733         recordParams->transferLength = 0;        // must set to 0
734     }
735
736     //////////////////////////////////////////////////////////////////// Start the record ////////////////////////////////////////////////////////////////////
737     SetConsoleTextAttribute (hConsole, FOREGROUND_GREEN | FOREGROUND_INTENSITY );
738     printf("\nCase 6: RTS_Record\n");
739     SetConsoleTextAttribute (hConsole, wOldColorAttrs);
740
741     //trigger immediately
742     if(recordParams->trigger == RTS_TRIGGER_IMMEDIATELY)
743     {
744         //send record command
745         if ((error = RTS_Record(++msgNum,
746                               serverInfo,
747                               recordParams,
748                               recordChanId,
749                               fileName[0])) != RTS_SUCCESS)
750         {
751             printf("Record Error # 0x%lx.\n", error);
752             exitHandler(error);
753             goto freeMem;
754         }
755
756         Sleep(500);
757     }
758
759     //wait for SW trigger
760     else if(recordParams->trigger == RTS_WAIT_FOR_SW_TRIGGER)
761     {
762         //send record command which set up record and start DMA
763         if ((error = RTS_Record(++msgNum,
764                               serverInfo,
765                               recordParams,
766                               recordChanId,
767                               fileName[0])) != RTS_SUCCESS)
```

**SPECIFICATIONS****PC Workstation**

Operating System: Windows®

Processor: Intel Core i7 processor or better

SDRAM: (standard) 8 GB

- Option -309: 16 GB
- Option -310: 32 GB
- Option -311: 64 GB

RAID

- Storage: 7.6, 15.3, 30.7, 61, 122.8, or 243.3 TB
- Drive Type: SATA III SSDs
- Supported RAID Levels: (standard) 0
  - Option -285: RAID 5
  - Option -286: RAID 6

**Analog Signal Inputs**

Input Type: Transformer-coupled, rear panel female SSMC connectors

Transformer Type: Coil Craft WBC4-6TLB

Full Scale Input: +8 dBm into 50 ohms

3 dB Passband: 300 kHz to 700 MHz

**A/D Converters**

Type: Texas Instruments ADS5485

Sampling Rate ( $f_s$ ): 10 MHz to 200 MHz

Resolution: 16 bits

A/D Record Bandwidth:  $f_s/2$  = Nyquist bandwidth

Anti-Aliasing Filters: External, user-supplied

**Digital Downconverter**

Type: Virtex-6 FPGA Mercury DDC IP Core

Decimation (D): 2 to 65,536

IF Center Frequency Tuning: DC to  $f_s$ , 32 bits

DDC Usable Bandwidth:  $0.8 \cdot f_s / D$

**Analog Signal Outputs**

Output Type: Transformer-coupled, front panel female SSMC connectors

Full Scale Output: +4 dBm into 50 ohms

3 dB Passband: 300 kHz to 700 MHz

**Digital Upconverter and D/As**

Type: Texas Instruments DAC5688 and Mercury-installed interpolation IP core

Interpolation: 2 to 65,536

Input Data Rate: 250 MHz max.

Output IF: DC to 400 MHz

Output Signal: Analog, real or quadrature

Output Sampling Rate: 800 MHz max. with 2, 4, or 8 interpolation

Resolution: 16 bits

**Clock Sources**

Selectable from onboard programmable VCXO, external or LVDS clocks

**External Clocks**

Type: Female SSMC connector, sine wave, 0 to +10 dBm, AC-coupled, 50 ohms, 10 to 200 MHz

**Multi-Recorder Sync/Gate Bus**

26-pin connector, dual clock/ sync/gate input/output LVDS buses; one sync/gate input TTL signal

**Physical and Environmental**

4U Long Chassis: 19" W x 21" D x 7" H

Weight: 50 lb, approx.

Operating Temp: 0° to +50° C

Storage Temp: -40° to +85° C

Relative Humidity: 5 to 95%, non-condensing

Operating Shock: 15 g max. (11 msec, half sine wave)

Operating Vibration: 10 to 20 Hz: 0.02 inch peak, 20 to 500 Hz: 1.4 g peak acceleration

Power Requirements: 100 to 240 VAC, 50 to 60 Hz, 500 W max.

Option -420	15.3 TB SSD storage capacity
Option -430	30.7 TB SSD storage capacity
Option -460	61.4 TB SSD storage capacity
Option -485	122.8 TB SSD storage capacity
Option -490	243.3 TB SSD storage capacity

General Options (append to all options)

Option -261	GPS time and position stamping
Option -264	IRIG-B time stamping
Option -268	40 GBE interface

Contact Mercury for compatible option combinations. Storage and general options may change, so contact Mercury for the latest information.

LIFETIME SUPPORT FOR TALON PRODUCTS

Mercury offers worldwide customers shorter development time, reliable, rugged solutions for a variety of environments, reduced costs, and mature software development tools. We offer free lifetime support from our engineering staff, which customers can depend on through phone and email, as well as software updates. Take advantage of our 40 years of experience in delivering high-performance radar, communications, SIGINT, EW, and data acquisition MIL-Aero solutions worldwide.
