SBC314

3U VPX QorIQ AMP T1042 / T2081-based Single Board Computer

The SBC314 is the first QorIQ™ AMP (advanced multiprocessing series) based product to join Abaco's VPXtreme3 family of rugged 3U VPX single board computers.

The SBC314 offers a high performance option based on the T2081 processor and a low power option based on the T1042 processor, allowing the user to select a solution tailored to their application.

• The T2081 brings the benefits of AltiVec co-processing to a 4-core platform, each of which is dual threaded, offering 8 virtual cores, consuming up to 25W.
• The T1042 is optimized for lower power consumption applications, offering 4 single threaded cores consuming less than 7.5W.

Combined with an extensive and flexible range of I/O options, the SBC314 is ideal for a wide range of high performance commercial, industrial, defense and aerospace applications.

Fully compatible with OpenVPX (VITA 65), the SBC314 offers multiple connectivity options via its highly configurable PCI Express™ fabric ports enabling a range of scalable solutions from single host and peripherals to larger multiprocessor systems.

In addition the SBC314 supports a diverse I/O set that includes Gigabit Ethernet, COM ports, USB 2.0, SATA and GPIO.

Further incremental system resource expansion is provided via an XMC/PMC-capable mezzanine site which offers the option of having either XMC I/O or PMC I/O routed to the VPX backplane connectors.

Designed specifically for harsh environments, the SBC314 is ideal for embedded and mil/aero applications where high reliability and survivability are a must. Available in five air- and conduction-cooled ruggedization levels, the SBC314 also offers VITA 48 formats for 2-level maintenance (2LM) requirements.

The SBC314 is fully supported by comprehensive Deployed Test Software (BIT and BCS) with operating system support for VxWorks® 6.x, 7, VxWorks653®; LynxOS-178, DEOS and Open Source Linux®.

In addition, the SBC314 is also supported by Abaco Systems innovative P2P software, which supports the implementation of PCI Express peer-to-peer connectivity.
